

oxidation-reduction reactions, 630–645
 balancing equations for, 637–641, 644, 650
 in blast furnaces, 814, 814*f*
 covalent bonds and, 634–635
 disproportionation, 644–645, 645*f*
 in electrochemical cells, 655–657
 half-reactions, 633–634
 nomenclature, 642*t*
 oxidation number rules, 631*t*
 oxidation states, 232–235, 235*t*, 631–632, 631*t*
 oxidizing and reducing agents, 642–645, 642*t*, 643*t*
 in photochromic lenses, 634
 titration exercise on, 652–653
oxidation states, 232–235, 235*t*, 631–632, 631*t*
oxides, 278–279, 834–835, 835*t*
oxidizing agents, 642–645, 642*t*, 643*t*
oxyacetylene torches, 728, 728*f*
oxyacids, 230–231, 230*t*, 469, 469*t*, 486*f*, 487
oxyanions, 225–227, 226*t*, 230, 469*t*
oxygen
 discovery of, 303
 electron configuration, 116*t*, 117
 isotopes, 82*t*
 molar mass, 240–241
 ozone, 189, 579, 732, 836
 properties, 10*f*, 832–833, 834*t*
 reactions with, 276–277, 277*f*, 283, 283*f*, 302–303
 resonance structures in, 189
ozone, 189, 579, 732, 836

P

paper chromatography
 capillary action in, 335, 335*f*
 in mixture separation, 12, 12*f*
 procedure, 432–433, 848–849, 848*f*, 849*f*
parent nuclides, 690
partial pressures, 365–368, 366*f*, 599
particle accelerators, 691, 691*f*

particles
 alpha, 74, 75*f*, 685*t*, 686, 693, 693*f*
 beta, 685*t*, 686, 686*f*
 colloids, 403–405, 404*f*, 404*t*
 positrons, 685*t*, 686–687
 solvated, 415, 415*f*
 subatomic, 72, 682
pascals, 364–365, 364*t*
Paschen spectral series, 103, 103*f*
Pauli exclusion principle, 112, 112*f*
Pauling, Linus, 161, 161*t*
p-block elements, 146–148, 147*t*
pepsin, 765
peptide bonds, 756
percentage composition, 242–244, 256
percentage error, 45
percentage yield, 317–318
perchloric acid, 484
perfluorocarbons, 417, 417*f*, 762
periodic law, 132–135, 134*f*.
See also **periodic table of the elements**
periodic table of atomic radii, 151*f*
periodic table of electron affinities, 157*f*
periodic table of electronegativities, 161*f*
periodic table of ionization energies, 153*f*
periodic table of the elements, 140*f*–141*f*
 artificial nuclides in, 692, 692*f*, 692*t*
 designing, 137, 172–173
 electron configuration and, 116–122, 116*t*, 117*t*, 118*t*, 120*t*
 groups in, 135–136, 135*f*, 136*f*, 143 (*see also* families)
 history of, 133–135, 134*f*
 new elements in, 114–115
 organization of, 16–17, 17*f*
 periodicity in, 136, 136*f*
 periods and blocks of, 138–139, 139*f*, 142–149, 144*f*, 163–164
periodic trends
 acidic and basic oxides, 835, 835*t*
 atomic radii, 150–152, 150*f*, 151*f*, 152*f*, 163

of *d*- and *f*-block elements, 163–164
 electron affinity, 157–159, 157*t*, 158*f*
 electronegativity, 161–164, 161*t*, 162*f*
 ionic radii, 159–160, 159*t*, 164
 ionization energy, 153–156, 153*t*, 154*f*, 155*t*, 164
 valence electrons, 160, 160*t*
periods, of elements, 17, 138–139, 138*t*
permanganate ions, 652–653
peroxide ions, 644–645
petroleum, 723, 723*t*
petroleum engineers, 720
pH, 498–521
 acid and base strength and, 509, 509*t*
 buffered solutions, 606–607, 606*f*
 calculations involving, 505–509, 509*t*, 526
 of common materials, 504*t*
 definition, 503
 enzyme activity and, 765
 hydrolysis of salts and, 608–612, 608*f*, 610*f*, 611*f*
 indicators, 511–512 (*see also* acid-base indicators)
 liming of streams, 510, 510*f*
 of neutral, acidic, and basic solutions, 500, 504*t*
 pH scale, 503–504, 503*f*, 504*t*
 proteins and, 765, 782–783
 of rain water, 514
 self-ionization of water and, 499–500, 499*f*, 500*t*, 599–600
 of tap water, 477
 titration, 515–521, 516*f*, 517*f*, 518*f*–519*f*, 528–529
phase diagrams, 347–348, 347*f*, 348*f*, 358*f*
phases, 342, 342*t*
phenolphthalein, 513*t*, 516, 516*f*
pH indicators. *See* **acid-base indicators**
pH meters, 512, 512*f*
phospholipids, 755, 755*f*, 823, 823*f*
phosphoric acid, 469*f*, 469*t*, 471, 480–481
phosphorus
 electron configuration, 117*t*
 fertilizers, 831, 831*t*
 oxidation numbers, 235*t*
 properties, 19, 828–829, 828*f*, 829*t*

radioactive decay, 689
photochemical processes, 836
photochemical smog, 836
photochromic lenses, 634
photoelectric effect, 99–100, 99*f*
photons, 100–101
photosynthesis, 306–307, 751, 766, 766*f*
pH paper, 8*f*, 468, 468*f*, 471, 512, 515*f*
physical changes, 7–8, 9*f*
physical chemistry, 4, 70, 445
physical chemists, 70
physical constants, 855*t*
physical properties, 7–8, 9*f*
pickling, 471
picometers (pm), 76
Planck, Max, 99
Planck's constant, 99, 855*t*
plasma (blood), 762
plasma (state of matter), 8, 680*f*
platinum, 144
Plunkett, Roy, 4
pOH, 503
polar bonds, 176–177, 176*f*, 177*f*, 204*t*
polar-covalent bonds, 176–177, 176*f*, 177*f*, 204*t*
polarity
 acid strength and, 474
 in crystals, 340–341, 340*t*
 dipole-dipole forces, 204–206, 205*f*, 206*f*
 dissolution and, 411–412, 412*f*
 of hydroxyl groups, 487
 ideal gas behavior and, 332
 London dispersion forces and, 207, 207*f*
 in phospholipids, 755, 755*f*, 823, 823*f*
 polar bonds, 176–177, 176*f*, 177*f*, 204*t*
polonium, 685, 706, 832, 834*t*
polyamides, 739
polyatomic ions, 194, 199–200, 230, 230*f*, 294
polyesters, 739
polyethylene, 738, 738*f*
polymerase chain reaction (PCR), 774
polymer products, 145, 748–749
polymers, 737–739, 738*f*, 748–749
polypeptides, 756
polyprotic acids, 479–481, 480*f*
polysaccharides, 753, 753*f*
porous barriers, 656–657, 656*f*
