

Example 1 A right trapezoidal prism is shown. Find the (a) lateral area, (b) total area, and (c) volume.

Solution

a. First find the perimeter of a base.

$$p = 5 + 6 + 5 + 12 = 28 \text{ (cm)}$$

Now use the formula for lateral area.

$$\text{L.A.} = ph = 28 \cdot 10 = 280 \text{ (cm}^2\text{)}$$

b. First find the area of a base.

$$B = \frac{1}{2} \cdot 4 \cdot (12 + 6) = 36 \text{ (cm}^2\text{)}$$

Now use the formula for total area.

$$\text{T.A.} = \text{L.A.} + 2B = 280 + 2 \cdot 36 = 352 \text{ (cm}^2\text{)}$$

c. $V = Bh = 36 \cdot 10 = 360 \text{ (cm}^3\text{)}$

Example 2 A right triangular prism is shown. The volume is 315. Find the total area.

Solution

First find the height of the prism.

$$V = Bh$$

$$315 = (\frac{1}{2} \cdot 10.5 \cdot 4)h$$

$$315 = 21h$$

$$15 = h$$

Next find the lateral area.

$$\text{L.A.} = ph = (10.5 + 6.5 + 7) \cdot 15 = 24 \cdot 15 = 360$$

Now use the formula for total area.

$$\text{T.A.} = \text{L.A.} + 2B = 360 + 2 \cdot 21 = 402$$

Classroom Exercises

Exercises 1–6 refer to the right prism shown.

- The prism is called a right ? prism.
- How many lateral faces are there?
- What kind of figure is each lateral face?
- Name two lateral edges and an altitude.
- The length of an altitude is called the ? of the prism.
- Suppose the bases are regular hexagons with 4 cm edges.
 - Find the lateral area.
 - Find the base area.
 - Find the total area.
 - Find the volume.
- Can a prism have lateral faces that are triangles?
- What is the minimum number of faces a prism can have?
- If two prisms have equal volumes, must they also have equal total areas?
- Since $1 \text{ yd} = 3 \text{ ft}$, $1 \text{ yd}^2 = \underline{\hspace{1cm}} \text{ ft}^2$ and $1 \text{ yd}^3 = \underline{\hspace{1cm}} \text{ ft}^3$.
 - Since $1 \text{ ft} = \underline{\hspace{1cm}} \text{ in.}$, $1 \text{ ft}^2 = \underline{\hspace{1cm}} \text{ in.}^2$ and $1 \text{ ft}^3 = \underline{\hspace{1cm}} \text{ in.}^3$.
 - Since $1 \text{ m} = \underline{\hspace{1cm}} \text{ cm}$, $1 \text{ m}^2 = \underline{\hspace{1cm}} \text{ cm}^2$ and $1 \text{ m}^3 = \underline{\hspace{1cm}} \text{ cm}^3$.
