

atoms (*continued*)
 structure of, 72–76, 74f, 75f, 76t, 110t
 subatomic particles, 682
ATP (adenosine triphosphate), 766–769, 767f, 769t, 824f
Aufbau principle, 111, 116, 116f
automobiles, 380, 579, 666, 669, 669f, 731, 811, 811f
average atomic masses, 81–82, 82t, 128
Avogadro's law, 379–380, 379f, 380f
Avogadro's number, 83, 86, 855t

B

balancing equations
 formula equations, 264–265, 267
 by inspection, 270–274, 294
 redox equations, 637–641, 650
 using models, 284
ball-and-stick models, 197–198, 197f, 198f, 713f
Balmer spectral series, 103, 103f
band of stability, 682–683, 683f
barium, 121, 618–620, 792–793, 792f, 794t
barometers, 363, 363f, 376
base dissociation constants, 610
base-pairing, 771–772, 771f, 824
bases, 471–489. *See also* **pH**
 amphoteric compounds, 485–487
 Arrhenius, 473, 475–476, 475t, 482t
 Brønsted-Lowry, 478–481, 480f, 482t
 calculating hydronium and hydroxide ion concentration in, 501–502
 conjugate, 483–485, 485t, 608–609
 dissociation constants, 610
 experimental determination of, 496–497
 household, 472
 hydrolysis of salts, 608–612, 608f, 610f, 611f
 Lewis, 481–482, 482t
 neutralization reactions, 487–489, 488f
 properties, 471–472
 strength of, 475–476, 475t, 476f, 484–485, 485t

batteries, 659–660, 659f, 660f, 669, 669f
Bequerel, Henri, 685, 693
benzene, 729, 729f
beryllium, 116, 116t, 792–793, 792f, 794t
Berzelius, Jöns Jacob, 444
beta particles, 685t, 686, 686f, 693, 693f
binary acids, 230–231, 230t, 468–469, 468t. *See also* **acids**
binary compounds, 222, 279
binary molecular compounds, 227–229, 228t, 229t
binding energy per nucleon, 682, 682f
biochemistry, 750–775, 819–824
 amino acids, 756, 756f, 757–758, 819, 819f
 carbohydrates, 751–753, 752f, 753f, 766, 821–822
 DNA, 771–772, 771f, 772f
 genetic engineering, 774–775, 774f
 lipids, 754–755, 754f, 755f, 822–823
 metabolism, 766–769, 767f, 768f, 769t
 nucleic acid structure, 770, 770f
 proteins, 757–765
 RNA, 773–774, 773f
bioluminescence, 102
blocks, of elements, 138–139, 139f
blood. *See also* **hemoglobin**
 artificial, 417, 417f, 762
 buffers in, 609
 carbon dioxide in, 816–817, 817f
 sickle cell anemia, 761, 761f
 transfusions, 762
Bohr, Niels, 101f, 102–103, 102f, 103f
boiling, 336, 344–345, 344f, 345f
boiling-point elevation, 450–451, 462
boiling points, 7f
 bonding types and, 203, 204t
 of crystalline solids, 340t
 determining, 462
 of liquids, 344–345, 344f, 345f
 of organic compounds, 722t, 723, 723t, 730t
 of water, 344, 344f, 351, 855t
bond angles, 199–201, 199f, 200t, 350
bond energy, 181, 182t, 187t
bonding. *See* **chemical bonding**

bond length, 181, 182t, 187t
bond strength, 196
boron, 113, 116, 116t, 183, 808–809, 808f, 810t
boron family elements, 808–811, 808f, 810t, 811t
boron trifluoride, 198, 198f, 203
Bosch, Karl, 597
Boyle, Robert, 369, 376–377, 396
Boyle's law, 369–370, 369f, 370f
bromine, 118t, 146, 161t, 162, 235t, 838–839, 838f, 839f, 840t
bromthymol blue, 513t, 516
Brønsted-Lowry acids and bases, 478–481, 480f, 482t
Brownian motion, 404
Buckyballs, 725
buffers, 606–607, 606f, 609
butane, 713, 713t, 717t

C

caffeine, 484
calcium
 dietary, 796, 796t
 electron configuration, 118, 118t
 properties, 792–793, 792f, 794t
 reactivity, 142, 142f, 793, 793f
calorimeters, 531, 539, 539f, 852–853, 852f
calorimetry, 558–559, 852–853, 852f, 853f
Cannizzaro, Stanislao, 133
capillary action, 335, 335f
carbohydrates
 chemical structure, 821–822, 821f, 822f
 condensation reactions, 752–753, 752f, 753f
 digestion of, 768
 disaccharides, 752, 752f, 821, 821f
 monosaccharides, 751–752, 752f, 821, 821f
 polysaccharides, 753, 753f
carbon
 allotropes, 725
 in aromatic hydrocarbons, 729, 729f
 Buckyballs, 725
 carbon cycle, 815, 815f
 covalent bonding in, 186–188, 187t
 electron configuration, 116t, 148, 202, 202f
 forms of, 542
 in iron ore reduction, 814, 814f
 isotopes, 82t, 695
 oxidation numbers, 235t
 properties, 812–813, 813t
carbonated beverages, 413, 413f
carbon-14 dating, 695. *See also* **radioactive dating**
carbon dioxide
 in the carbon cycle, 815, 815f
 dry ice, 358–359
 molecular geometry of, 201
 nonpolarity of, 205f
 phase diagram, 358f
 properties, 815
 in respiration, 816–817, 817f
carbon family of elements, 812–827. *See also* *under names of individual elements*
carbon monoxide, 275, 815, 818, 818t
carbonyl groups, 733
carboxyl groups, 734, 734f
carboxylic acids, 731t, 734, 734f
careers in chemistry
 analytical chemist, 516
 chemical technician, 300
 computational chemist, 204
 environmental chemist, 408
 forensic chemist, 774
 materials scientist, 145
 petroleum engineer, 720
 pharmacist, 222
casein, 760, 760t, 782–783
catabolism, 768–769, 768f, 769t
catalysis, 570, 571f
catalysts
 catalytic converters, 579
 in chemical equations, 266
 enzymes as, 763–764, 763f
 heterogeneous vs. homogeneous, 570
 reaction rate and, 570, 570f, 571f
catalytic converters, 579
catenation, 712, 712f
cathode rays, 72–73, 72f, 73f
cathodes, 72f, 656, 656f
cathodic protection, 662, 662f
cations
 hydrolysis of, 609–610
 ionic radii, 159–160, 159t, 164
 nomenclature, 220, 221t, 224–225, 224f
