

eyeglasses, 502, 502*t*; image characteristics of, 498, 498*f*; magnification of, 499, 499*t*; ray diagrams for, 495–496, 495*f*, 495*t*, 498*f*; thin-lens equation for, 499, 499*t*

domains, magnetic, 679, 679*f*

doping, 646, 929

Doppler, Christian, 412

Doppler effect, 412–413, 412*f*, 912, 912*t*

double-slit interference patterns, 527–530, 527*f*, 528*f*, 529*f*, 530*f*; diffraction and, 532

drift velocity, 610–611, 611*f*

DVD (digital versatile disc), 544

E

Earth (*see also* **free fall**): capacitance of, 604; data for calculations, 868; gravitational field of, 245–247, 246*f*; magnetic field of, 681–682, 681*f*, 688, 710, 767

echolocation, 407

Eddington, Arthur S., 921

eddy currents, 284

effective current, 723–726, 723*f*, 724*f*, 724*t*

efficiency (*eff*): of heat engines, 352–354, 353*t*; of machines, 260, 270–271

Einstein, Albert: black holes and, 243; de Broglie waves and, 772; general theory of relativity and, 243, 920–921, 920*f*, 921*f*; particle nature of light and, 922; photoelectric effect and, 757, 759; special theory of relativity and, 914, 915, 916–917, 918, 919, 930

elastic collisions, 216–219, 217*f*, 219*t*

elastic forces, 368–370, 368*f*, 379

elastic potential energy, 170–171, 170*f*, 173–175, 174*f*, 371, 371*f*

electrical breakdown, 593, 606, 606*f*

electrical conductors, 561–562, 562*f* (*see also* **charge carriers**; **electric current**; **resistance**); band theory and, 926–927, 926*f*, 927*f*; charging by contact, 561, 590; charging by induction, 562, 562*f*, 590; in electrostatic equilibrium, 578, 578*f*, 578*t*, 611; grounded, 562, 562*f*, 598; magnetic field associated with, 684–685, 684*f*, 685*f*, 702–703; magnetic force on, 690–693, 690*f*, 691*f*, 693*f*; in schematic diagrams, 641*t*; superconductors, 561, 617, 928–929, 928*f*, 929*f*

electrical energy (*see also* **electric power**): household appliances and, 620, 622; power lines and, 623, 623*f*, 729; stored in field, 733

electrical insulators, 561, 563, 563*f*

electrical potential energy, 594–595, 594*f*, 595*f*, 596 (*see also* **electric potential**; **potential difference**); of charges in circuit, 619, 619*f*, 645; conversion of, 619–621, 619*f*, 645; potential difference and, 596–597, 599–600; sources of, 618, 618*f*, 644 (*see also* **batteries**; **generators**); stored in capacitor, 602, 605–606

electric charge, 558–560, 559*f* (*see also* **charge carriers**; **charged particles**); acceleration of, 732, 763; bonds between particles and, 318; on capacitor, 602–606, 602*f*; on conductors in electrostatic equilibrium, 578, 578*f*, 578*t*; conservation of, 559, 647; current and, 608–610, 608*f*, 610*t*; field lines of, 576–577, 576*f*, 576*t*, 577*f*; field of, 572–575, 572*f*, 573*f*; force exerted by, 121, 121*f*, 564–571, 571*f*, 573; fractional, 814, 814*t*, 817; induced on conductor, 562, 562*f*, 590; magnetic force and, 687–690, 688*f*, 690*f*; polarization of, 562, 563, 563*f*; potential energy associated with, 594–595, 594*f*, 595*f*, 596 (*see also* **electrical potential energy**); quantization of, 560, 560*f*, 560*t*; static electricity and, 558–559, 558*f*, 559*f*, 588–591; transfer of, 561–563, 562*f*, 563*f*; two kinds of, 558–559, 558*t*, 559*f*; unit of, 560

electric circuits, 642–645, 642*f*, 644*f* (*see also* **alternating current [ac] circuits**; **electric current**; **parallel circuits**; **series circuits**); complex, 657–662, 657*f*, 659*t*; household, 618, 619, 657, 657*f*, 726; integrated, 646; schematic diagrams of, 640, 640*f*, 641*t*, 723, 723*f*

electric current, 608–610 (*see also* **alternating current**; **charge carriers**; **current loops**; **electrical conductors**; **electric circuits**; **resistance**); as basic dimension, 10; in complex circuit, 657, 659–661, 659*t*; conventional, 610, 610*t*; direct, 619, 619*f*, 719, 719*f* (*see also* **batteries**); effective, 723–726, 723*f*, 724*f*, 724*t*; electric field and, 610, 611, 611*f*; of household circuits, 618, 619, 657; human body and, 608, 615, 722; induced, 710–712, 710*t*, 711*f* (*see also* **electromagnetic induction**); magnetic field associated with, 684–685, 684*f*, 685*f*, 702–703; magnetic force on conductor of, 690–693, 690*f*, 691*f*, 693*f*; measurement with ammeter, 693, 726; in parallel circuit, 652–656, 653*t*, 674–675; power and, 620, 623, 723–724; rms value of, 724–726, 724*f*, 724*t*; in series circuit, 647–651, 648*f*, 653*t*, 674–675; two types of, 619, 619*f*; unit of, 608

electric dipole, 577, 577*f*

electric field, 570, 572–578 (*see also* **electric force**); of conductors in electrostatic equilibrium, 578, 578*t*; current and, 610, 611, 611*f*; direction of, 572, 572*f*; of electromagnetic waves, 447, 447*f*, 472, 472*f*, 731–732, 732*f*; energy stored in, 733; lines, 576–577, 576*f*, 576*t*, 577*f*; of point charge, 573–574; potential difference in, 597; potential energy of charge in, 595, 595*f*; superposition principle and, 573, 574–575; test charge and, 572, 573, 573*f*, 574; typical values of, 574*t*; unit of, 572

electric force, 121, 121*f*, 564–571 (*see also* **Coulomb's law**; **electric field**); equilibrium of charges and, 568–569; gravity compared to, 570; superposition principle and, 566–568

electrician, 624

electric potential, 596 (*see also* **electrical potential energy**; **potential difference**); due to point charge, 597–598, 597*f*; superposition principle and, 598; zero, 598, 600

electric power, 618–623 (*see also* **electrical energy**); dissipated by resistance, 620, 621, 622, 623, 723–724, 729; household usage of, 620, 622; transformer and, 728, 729; wattage of light bulbs, 180, 180*f*, 450, 620
