

Written Exercises

Draw a triangle that satisfies the conditions stated. If no triangle can satisfy the conditions, write *not possible*.

- A**
- An acute isosceles triangle
 - A right isosceles triangle
 - An obtuse isosceles triangle
 - An acute scalene triangle
 - A right scalene triangle
 - An obtuse scalene triangle
 - A triangle with two acute exterior angles
 - A triangle with two obtuse exterior angles

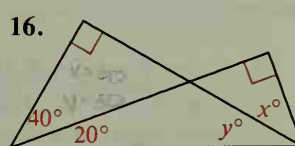

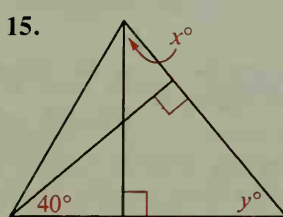

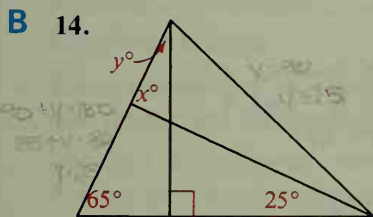

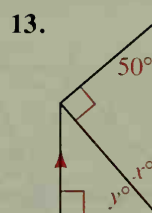

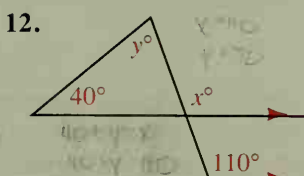

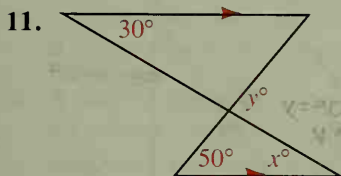

Complete.

- $m\angle 6 + m\angle 7 + m\angle 8 = \underline{\quad? \quad}$
- If $m\angle 6 = 52$ and $m\angle 11 = 82$, then $m\angle 7 = \underline{\quad? \quad}$
- If $m\angle 6 = 55$ and $m\angle 10 = 150$, then $m\angle 8 = \underline{\quad? \quad}$
- If $m\angle 6 = x$, $m\angle 7 = x - 20$, and $m\angle 11 = 80$, then $x = \underline{\quad? \quad}$
- If $m\angle 8 = 4x$, $m\angle 7 = 30$, and $m\angle 9 = 6x - 20$, then $x = \underline{\quad? \quad}$
- $m\angle 9 + m\angle 10 + m\angle 11 = \underline{\quad? \quad}$

Exs. 5-10

Find the values of x and y .

- The lengths of the sides of a triangle are $4n$, $2n + 10$, and $7n - 15$. Is there a value of n that makes the triangle equilateral? Explain.
- The lengths of the sides of a triangle are $3t$, $5t - 12$, and $t + 20$.
 - Find the value(s) of t that make the triangle isosceles.
 - Does any value of t make the triangle equilateral? Explain.
