

8. Three  $45^\circ$ - $45^\circ$ - $90^\circ$  triangles are shown below.
- In each triangle, express  $\tan 45^\circ$  in simplified form.
  - See the entry for  $\tan 45^\circ$  on page 311. Is the entry exact?

9. Three  $30^\circ$ - $60^\circ$ - $90^\circ$  triangles are shown below.
- In each triangle, express  $\tan 60^\circ$  in simplified radical form.
  - Use  $\sqrt{3} \approx 1.732051$  to find an approximate value for  $\tan 60^\circ$ .
  - Is the entry for  $\tan 60^\circ$  on page 311 exact? Is it correct to four decimal places?

10. Notice that the tangent values increase rapidly toward the end of the table on page 311. Explain how you know that there is some angle with a tangent value equal to 1,000,000. Is there any upper limit to tangent values?
11. Two ways to find the value of  $x$  are started below.

Using  $\tan 40^\circ$ :

$$\tan 40^\circ = \frac{27}{x}$$

$$0.8391 \approx \frac{27}{x}$$

Using  $\tan 50^\circ$ :

$$\tan 50^\circ = \frac{x}{27}$$

$$1.1918 \approx \frac{x}{27}$$

Which of the following statements are correct?

a.  $x \approx 27 \cdot 0.8391$

b.  $x \approx 27 \cdot 1.1918$

c.  $x \approx \frac{27}{0.8391}$

d.  $x \approx \frac{27}{1.1918}$

Which correct statement is easier to use for computing if you are *not* using a calculator for the arithmetic?
