

## Cumulative Review: Chapters 1–3

Complete each statement with the word *always*, *sometimes*, or *never*.

- A**
- If  $\overleftrightarrow{AB}$  intersects  $\overline{CD}$ , then  $\overline{AB}$  ? intersects  $\overline{CD}$ .
  - If two planes intersect, their intersection is ? a line.
  - If  $a \perp c$  and  $b \perp c$ , then  $a$  and  $b$  are ? parallel.
  - If two parallel planes are cut by a third plane, then the lines of intersection are ? coplanar.
  - A scalene triangle ? has an acute angle.

Draw a diagram that satisfies the conditions stated. If the conditions cannot be satisfied, write *not possible*.

- $\overline{AB}$  and  $\overline{XY}$  intersect and  $A$  is the midpoint of  $\overline{XY}$ .
- A triangle is isosceles but not equilateral.
- Three points all lie in both plane  $M$  and plane  $N$ .
- Two lines intersect to form adjacent angles that are not supplementary.
- Points  $A$  and  $B$  on a number line have coordinates  $-3.5$  and  $8.5$ . Find the coordinate of the midpoint of  $\overline{AB}$ .
- $\overrightarrow{QX}$  bisects  $\angle PQR$ ,  $m\angle PQX = 5x + 13$ , and  $m\angle XQR = 9x - 39$ . Find (a) the value of  $x$  and (b)  $m\angle PQR$ .
- The measure of a supplement of an angle is 35 more than twice the complement of the angle. Find the measures of the angle, its supplement, and its complement.
- The measures of two angles of a triangle are five and six times as large as the measure of the smallest angle. Find all three measures.

In the diagram  $\overleftrightarrow{AB}$  bisects  $\angle DHF$ ,  $\overleftrightarrow{AB} \perp \overline{GH}$ ,  $\overleftrightarrow{AB} \parallel \overleftrightarrow{CD}$ , and  $m\angle AHD = 60^\circ$ . Find the measure of each angle.

- |                  |                  |                  |
|------------------|------------------|------------------|
| 14. $\angle FHD$ | 15. $\angle AHG$ | 16. $\angle FHG$ |
| 17. $\angle GHB$ | 18. $\angle BHC$ | 19. $\angle DHC$ |
| 20. $\angle HDE$ | 21. $\angle HDC$ | 22. $\angle HCD$ |

Tell whether each statement is true or false. Then write the converse and tell whether it is true or false.

- If two lines do not intersect, then they are parallel.
- If two lines intersect to form right angles, then the lines are perpendicular.
- An angle is acute only if it is not obtuse.
- A triangle is isosceles if it is equilateral.
