

Cumulative Review: Chapters 1-14

True-False Exercises

Classify each statement as true or false.

- A**
- Three given points are always coplanar.
 - Each interior angle of a regular n -gon has measure $\frac{(n-2)180}{n}$.
 - If $\triangle RST \cong \triangle RSV$, then $\angle SRT \cong \angle SRV$.
 - The contrapositive of a true conditional is sometimes false.
 - Corresponding parts of similar triangles must be congruent.
 - An acute angle inscribed in a circle must intercept a minor arc.
 - In a plane the locus of points equidistant from M and N is the midpoint of \overline{MN} .
 - If a cylinder and a right prism have equal base areas and equal heights, then they have equal volumes.
 - A triangle with vertices $(a, 0)$, $(-a, 0)$, and $(0, a)$ is equilateral.
 - If the slopes of two lines have opposite signs, the lines are perpendicular.
 - $R_k \circ R_k = I$
 - If a figure has 90° rotational symmetry, then it also has point symmetry.
- B**
- A point lies on the bisector of $\angle ABC$ if and only if it is equidistant from A and C .
 - In $\triangle RST$, if $RS < ST$, then $\angle R$ must be the largest angle of the triangle.
 - A triangle with sides of length $2x$, $3x$, and $4x$ must be obtuse.
 - In a right triangle, the altitude to the hypotenuse is always the shortest of the three altitudes.
 - Given a segment of length t , it is possible to construct a segment of length $t\sqrt{3}$.
 - If an equilateral triangle and a regular hexagon are inscribed in a circle, then the ratio of their areas is $1:2$.
 - The lateral area of a cone can be equal to the area of the base of the cone.
 - The circle $(x+3)^2 + (y-2)^2 = 4$ is tangent to the line $x = -1$.

Multiple-Choice Exercises

Write the letter that indicates the best answer.

- A**
- The measure of an interior angle of a regular decagon is:
 a. 36 b. 108 c. 72 d. 144
 - Which of the following is *not* a method for proving two triangles congruent?
 a. HL b. AAS c. SSA d. SAS
