

In Exercises 16–17 a segment joins the midpoints of two sides of a triangle. Find the values of x and y .

18. Given: A is the midpoint of \overline{OX} ;
 $\overline{AB} \parallel \overline{XY}$; $\overline{BC} \parallel \overline{YZ}$
 Prove: $\overline{AC} \parallel \overline{XZ}$

19. Given: $\square ABCD$; $\overline{BE} \parallel \overline{MD}$;
 M is the midpoint of \overline{AB} .
 Prove: $DE = BC$

20. Given: \overline{PQ} , \overline{RS} , and \overline{TU} are each
 perpendicular to \overline{UQ} ;
 R is the midpoint of \overline{PT} .
 Prove: R is equidistant from U and Q .

21. $EFGH$ is a parallelogram whose diagonals intersect at P . M is the midpoint of \overline{FG} . Prove that $MP = \frac{1}{2}EF$.

22. A skew quadrilateral $SKEW$ is shown. M , N , O , and P are the midpoints of \overline{SK} , \overline{KE} , \overline{WE} , and \overline{SW} . Explain why $PMNO$ is a parallelogram.

23. Draw $\triangle ABC$ and label the midpoints of \overline{AB} , \overline{AC} , and \overline{BC} as X , Y , and Z , respectively. Let P be the midpoint of \overline{BZ} and Q be the midpoint of \overline{CZ} . Prove that $PX = QY$.
24. Draw $\triangle ABC$ and let D be the midpoint of \overline{AB} . Let E be the midpoint of \overline{CD} . Let F be the intersection of \overline{AE} and \overline{BC} . Draw \overline{DG} parallel to \overline{EF} meeting \overline{BC} at G . Prove that $BG = GF = FC$.
