

**TABLE 6** Relative Strengths of Acids and Bases

	Conjugate acid	Formula	Conjugate base	Formula	
↑ Increasing acid strength	hydriodic acid*	HI	iodide ion	I <sup>-</sup>	Increasing base strength ↓
	perchloric acid*	HClO <sub>4</sub>	perchlorate ion	ClO <sub>4</sub> <sup>-</sup>	
	hydrobromic acid*	HBr	bromide ion	Br <sup>-</sup>	
	hydrochloric acid*	HCl	chloride ion	Cl <sup>-</sup>	
	sulfuric acid*	H <sub>2</sub> SO <sub>4</sub>	hydrogen sulfate ion	HSO <sub>4</sub> <sup>-</sup>	
	chloric acid*	HClO <sub>3</sub>	chlorate ion	ClO <sub>3</sub> <sup>-</sup>	
	nitric acid*	HNO <sub>3</sub>	nitrate ion	NO <sub>3</sub> <sup>-</sup>	
	hydronium ion	H <sub>3</sub> O <sup>+</sup>	water	H <sub>2</sub> O	
	chlorous acid	HClO <sub>2</sub>	chlorite ion	ClO <sub>2</sub> <sup>-</sup>	
	hydrogen sulfate ion	HSO <sub>4</sub> <sup>-</sup>	sulfate ion	SO <sub>4</sub> <sup>2-</sup>	
	phosphoric acid	H <sub>3</sub> PO <sub>4</sub>	dihydrogen phosphate ion	H <sub>2</sub> PO <sub>4</sub> <sup>-</sup>	
	hydrofluoric acid	HF	fluoride ion	F <sup>-</sup>	
	acetic acid	CH <sub>3</sub> COOH	acetate ion	CH <sub>3</sub> COO <sup>-</sup>	
	carbonic acid	H <sub>2</sub> CO <sub>3</sub>	hydrogen carbonate ion	HCO <sub>3</sub> <sup>-</sup>	
	hydrosulfuric acid	H <sub>2</sub> S	hydrosulfide ion	HS <sup>-</sup>	
	dihydrogen phosphate ion	H <sub>2</sub> PO <sub>4</sub> <sup>-</sup>	hydrogen phosphate ion	HPO <sub>4</sub> <sup>2-</sup>	
	hypochlorous acid	HClO	hypochlorite ion	ClO <sup>-</sup>	
	ammonium ion	NH <sub>4</sub> <sup>+</sup>	ammonia	NH <sub>3</sub>	
	hydrogen carbonate ion	HCO <sub>3</sub> <sup>-</sup>	carbonate ion	CO <sub>3</sub> <sup>2-</sup>	
	hydrogen phosphate ion	HPO <sub>4</sub> <sup>2-</sup>	phosphate ion	PO <sub>4</sub> <sup>3-</sup>	
	water	H <sub>2</sub> O	hydroxide ion	OH <sup>-</sup>	
	ammonia	NH <sub>3</sub>	amide ion†	NH <sub>2</sub> <sup>-</sup>	
	hydrogen	H <sub>2</sub>	hydride ion†	H <sup>-</sup>	

\* Strong acids

† Strong bases

conjugate acid, H<sub>2</sub>. In aqueous solutions, all of the strong acids are 100% ionized, forming hydronium ions along with their anion. The acids below hydronium ion in **Table 6** do not ionize 100% in water. Acid strength alone does not predict reactivity. Although water is a weak acid, the hydride ion is a strong enough base to pull a proton from water. Such a reaction is illustrated in **Figure 11**.

## Amphoteric Compounds

You have probably noticed that water can be either an acid or a base. *Any species that can react as either an acid or a base is described as amphoteric.* For example, consider the first ionization of sulfuric acid, in which water acts as a base.
