

## Chapter 6

Indicate the best answer by writing the appropriate letter.

- Which of the following statements *must* be false?
  - $QR + PR > PQ$
  - $m\angle 2 > m\angle P + m\angle R$
  - $\frac{1}{2}m\angle 2 > \frac{1}{2}m\angle 1$
  - $PQ > PR$
- You don't need a figure to do this exercise. Given that  $m\angle A = m\angle B$ , you want to prove that  $m\angle 3 = m\angle 4$ . To write an indirect proof, you should begin by temporarily assuming which statement?
  - $m\angle A \neq m\angle B$
  - $m\angle A = m\angle B$
  - $m\angle 3 = m\angle 4$
  - $m\angle 3 \neq m\angle 4$
- In quadrilateral  $MNPQ$ ,  $MN = 5$ ,  $NP = 6$ ,  $PQ = 7$ , and  $QM = 9$ . Which of the following might possibly be the length of  $\overline{NQ}$ ?
  - 12.5
  - 14
  - 2
  - all of these
- Given: (1) If  $A$  is white, then  $B$  is red.  
(2)  $B$  is not red.  
Which of the following *must* be true?
  - $B$  is white.
  - $B$  is not white.
  - $A$  is not white.
  - $A$  is red.
- If a conditional is known to be true, then which of the following *must* also be true?
  - its converse
  - its contrapositive
  - its inverse
  - none of these
- In  $\triangle DEF$ ,  $m\angle D = 50$ , and an exterior angle with vertex  $F$  has measure 120. What is the longest side of  $\triangle DEF$ ?
  - $\overline{DE}$
  - $\overline{EF}$
  - $\overline{DF}$
  - unknown
- In  $\triangle MNP$ ,  $MN = 8$  and  $NP = 10$ . Which of these *must* be true?
  - $MP > 2$
  - $MP < 2$
  - $MP > 10$
  - $MP < 10$
- What is the inverse of "If  $x = 3$ , then  $x > 0$ "?
  - If  $x > 0$ , then  $x = 3$ .
  - If  $x \neq 3$ , then  $x \leq 0$ .
  - If  $x \leq 0$ , then  $x \neq 3$ .
  - If  $x = 3$ , then  $x \leq 0$ .

Ex. 1

- If  $RT = ST$  and  $RX > SX$ , what can you conclude?
  - $m\angle 1 > m\angle 2$
  - $m\angle XRS > m\angle XSR$
  - $m\angle 3 = m\angle 4$
  - $m\angle 5 > m\angle 6$
- If  $RX = SX$  and  $m\angle 5 > m\angle 6$ , what can you conclude?
  - $m\angle TRS < m\angle TSR$
  - $RT < ST$
  - $m\angle 1 > m\angle 2$
  - $m\angle 3 > m\angle 4$
- Which of the following is an important part of an indirect proof?
  - Proving that the hypothesis *cannot* be deduced from the conclusion
  - Proving that the temporary assumption must be true
  - Assuming temporarily that the conclusion must be true
  - Finding a contradiction of a known fact
