**2.** Draw any  $\angle ABC$ . Use Construction 2, below, to construct  $\angle DEF$  congruent to  $\angle ABC$ .

## Construction 2 Congruent angle

Given an angle, construct an angle congruent to the given angle.

Given: ∠ABC

Construct: An angle congruent to  $\angle ABC$ 

Procedure: Place a piece of paper over  $\angle ABC$  and trace  $\angle ABC$ 

onto the piece of paper. Label the new angle  $\angle DEF$ .

 $\angle DEF$  is congruent to  $\angle ABC$ .

Draw the figure described. Then use paper folding to do the indicated construction.

- 3. Given: Any obtuse  $\angle JKL$  Construct: The bisector of  $\angle JKL$
- 4. Given: Any segment  $\overline{HM}$ Construct: The perpendicular bisector of  $\overline{HM}$
- **5.** Given: Any point *D* on a line *l* Construct: The perpendicular to *l* at *D*
- **6.** Given: Any point *R* outside a line *n* Construct: The perpendicular to *n* from *R*

For Exercises 7-9, refer to Construction 7 below.

## Construction 7 Parallel through a point outside a line

Given a point outside a line, construct the parallel to the line through the given point.

Given: Point *P* outside line *n* 

Construct: The line through P parallel to n

Procedure: Construct the perpendicular to n from P. Label it k.

Construct the perpendicular to k at P. Label it m.

m is the line through P parallel to n.

- 7. Draw a line *n* and a point *P* outside the line. Construct the line through *P* that is parallel to *n*.
- 8. Which of Constructions 1–6 are used in Construction 7?
- **9.** Write an explanation to justify that m is parallel to n.

For each of Exercises 10 and 11, trace  $\overline{AB}$  onto a new piece of paper. Then use paper folding.

A

- 10. a. Divide  $\overline{AB}$  into two congruent parts.
  - b. Which construction did you use in part (a)?
- 11. a. Divide  $\overline{AB}$  into four congruent parts.
  - b. Explain the method you used in part (a).
